

Contaminated Products Insurance

Axon's Contaminated Product Insurance policy is designed to protect manufacturers of food, beverage and topical products in the event of a product contamination.

With a rising trend in product recalls in the United States, Axon's Contaminated Product Insurance protects the Insured from financial losses which can originate from an accidental contamination, government recall, property impairment, or malicious product tampering.

The coverage options target the economic impact deriving from recall efforts, replacement or restoration of products, third party recall, loss of gross profit, rehabilitation, marketing, and crisis expert response costs.
